

Q1. Write any 2 advantages and 2 disadvantages of Squarespace

Advantages:

- 1. User-Friendly Interface: Uses drag-and-drop tools making it ideal for beginners.  
Example: A beginner can easily add images, text, and videos without coding.
- 2. All-in-One Platform: Includes hosting, SSL, security, themes, and domain support.  
Example: No need to buy hosting from another provider?everything is integrated.
- 3. Responsive Templates: All themes are mobile-optimized.
- 4. Built-in E-commerce: Great for small online stores.

Disadvantages:

- 1. Limited Customization: Less control over backend and advanced features.
- 2. Expensive Plans: Higher monthly pricing compared to competitors like WordPress.
- 3. No Free Plan: Only 14-day trial is available.
- 4. Limited App Integrations: Fewer third-party extensions.

Q2. Compare Wix, WordPress, and Squarespace

| Feature            | Wix                      | WordPress.org              | Squarespace                      |  |
|--------------------|--------------------------|----------------------------|----------------------------------|--|
| -----              | -----                    | -----                      | -----                            |  |
| Ease of Use        | Very easy, visual editor | Requires setup and plugins | Easy, beginner-friendly          |  |
| Hosting            | Included                 | Requires separate hosting  | Included                         |  |
| Customization      | Limited backend control  | Full control with coding   | Limited advanced control         |  |
| Design Flexibility | High                     | Very high                  | Stylish, but limited flexibility |  |
| Best For           | Beginners, portfolios    | Developers, blogs          | Creative professionals           |  |
| E-commerce         | With premium plans       | Powerful with WooCommerce  | Built-in but limited             |  |

Q3. Differentiate between Drupal, Joomla, Magento

| Feature       | Drupal               | Joomla             | Magento            |
|---------------|----------------------|--------------------|--------------------|
| Purpose       | Complex web apps     | Community sites    | E-commerce stores  |
| Ease of Use   | Steep learning curve | Easier than Drupal | Complex, pro-level |
| Customization | High (needs coding)  | Moderate           | Very High          |
| Security      | Very secure          | Good               | Enterprise-grade   |
| Scalability   | Very scalable        | Medium-scale       | Highly scalable    |
| Example       | Government sites     | Forums, intranets  | Amazon-style sites |

Q4. CSS Box Model - Layers and Calculation

Layers:

- 1. Content
- 2. Padding
- 3. Border
- 4. Margin

Formula:

Total Width = Content + Padding + Border + Margin

Example:

```
div {  
  
width: 200px;  
  
padding: 10px;  
  
border: 2px solid black;
```

margin: 5px;

}

? Total Width = 200 + 20 + 4 + 10 = 234px

## Q5. New Features of CSS 2025

1. Container Queries
2. Subgrid
3. :has() Selector
4. color-mix(), relative-color()
5. Scroll-linked Animations
6. CSS Nesting

## Q6. Z-index and Position in CSS

Z-index:

- Controls stack order.
- Needs positioned elements (relative, absolute, etc.)

Position Types:

1. static (default)
2. relative
3. absolute
4. fixed
5. sticky

Example:

```
.sticky-header {  
  
    position: sticky;  
  
    top: 0;  
  
}
```

## Q7. Group vs Universal Selector

Group Selector (`,` ) - targets specific elements.

Example: h1, p { margin: 0; }

Universal Selector (`\*`) - targets all elements.

Example: \* { box-sizing: border-box; }

Key Difference:

Group = listed tags; Universal = everything
