

- 1) What is HTML? Explain Historical roots of HTML
- 2) Write a note on webpage
- 3) What is websites? Explain in detail
- 4) Explain structure of HTML document with example
- 5) What is list? Explain with all attributes & example.
- 6) Define Frameset, Frame Tag.
- 7) Divide the web page into four equal parts each individual part displays different web page. 3. Define Form tag.
- 8) Design a Registration page by using all Form controls.
- 9) Define Table tag and their attributes with an example.
- 10) Explain about Cascading Style Sheets with an example.
- 11) What is the difference between an HTML element and a tag?
- 12) What are attributes in HTML?
- 13) What is CSS and what does it do?
- 14) What are the different ways to include CSS in an HTML document?
- 15) Explain the different types of CSS (Inline, Internal/Embedded, External).
- 16) What is the purpose of CSS selectors?
- 17) Explain the CSS box model.
- 18) Explain the structure of a CSS rule (selector and declaration).
- 19) How do you select elements by tag name, class, and ID?
- 20) What are some common CSS properties for controlling text formatting (e.g., font-family, font-size, color)?
- 21) What are some CSS properties for controlling background (e.g., background-color, background-image)?
- 22) What are some CSS properties for controlling layout (e.g., float, margin, padding)?
- 23) How do you create a CSS rule that applies to multiple elements?
- 24) What is the difference between margin and padding?
- 25) How do you control the size and position of an element?
- 26) How do you create a CSS rule that applies to an element only when it is being hovered over?
- 27) Explain the different types of CSS positioning (e.g., static, relative, absolute, fixed).
- 28) Write an HTML code for the following output

|          |           |          |          |    |
|----------|-----------|----------|----------|----|
| Animal   | Tortoise  | Eagle    | Elephant |    |
| Lifespan | 153 years | 55 years | 70       | 90 |

- 29) Write an HTML code for the following output

|          |                                                                                     |              |
|----------|-------------------------------------------------------------------------------------|--------------|
| Red Bird |  | Nested Table |
|----------|-------------------------------------------------------------------------------------|--------------|

30) Write an HTML code for the following output using frame

31) Write an HTML code to demonstrate the use of following using <ol> tag:

1. Numbers
2. Uppercase Letters
3. Lowercase letters
4. Uppercase Roman Numbers
5. Lowercase Roman Numbers

|           |           |           |             |             |
|-----------|-----------|-----------|-------------|-------------|
| 1. Item 1 | A. Item 1 | a. Item 1 | I. Item 1   | i. Item 1   |
| 2. Item 2 | B. Item 2 | b. Item 2 | II. Item 2  | ii. Item 2  |
| 3. Item 3 | C. Item 3 | c. Item 3 | III. Item 3 | iii. Item 3 |

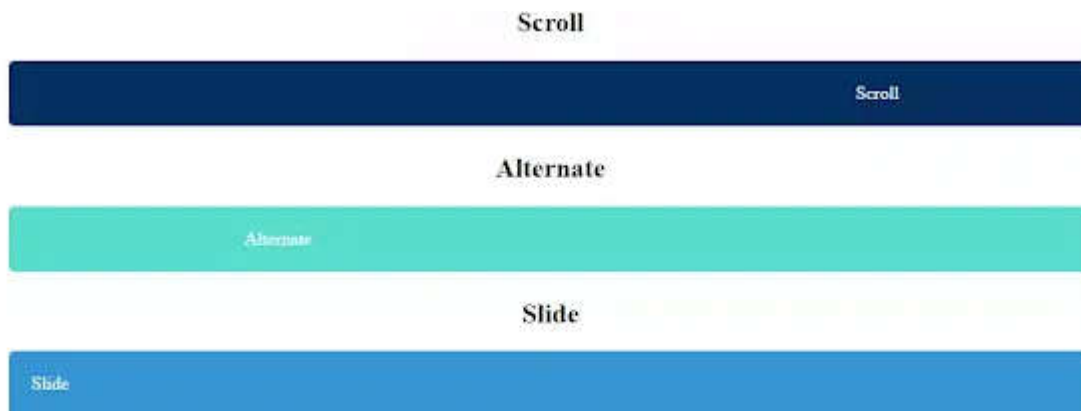

32) Write an HTML code for the following:

- Fruits
  - Mango
  - Orange
- Vegetables
  - Cabbage
  - Capsicum
    - Green Capsicum
    - Yellow Capsicum
    - Red Capsicum

33) Write an HTML code for the following:

| Device     | Brand   | Specifications |         |
|------------|---------|----------------|---------|
| Smartphone | Apple   | Model          | Storage |
|            |         | iPhone 12 Pro  | 256GB   |
|            |         | iPhone SE      | 128GB   |
| Laptop     | HP      | 15.6" Display  |         |
| Tablet     | Samsung | 10.5" Display  |         |

34) Write an HTML code using <marquee> to demonstrate the behaviour attribute.

35) What are **hyperlinks** in HTML? Write an example of linking an external webpage and an internal webpage.

36) What is the <colgroup> element in HTML? How does it help in styling tables?

37) Compare Wix, WordPress and Squarespace.

38) What is a **CMS (Content Management System)**? How does it help in website development?

39) Describe the role of <source> tag within <audio> and <video>. Why is it useful? Give example

- 40) What is the purpose of the name and value attributes in input elements? Write HTML code to create a form with fields for name, email, and password. Include a submit button and a dropdown menu with three options of state names.
- 41) List any 3 advantages and 3 disadvantages of using website builders like Wix or Squarespace
- 42) Write the HTML tag to embed a video on a webpage.
- 43) Create an Registration form in HTML

### Registration Form

First Name :

Last Name :

Email :

Password :

Gender:

Male ☐

Female ☐

Other ☐

Age :

Preferences :

Acrylic Painting ☐

Oil Painting ☐

Water Color Painting ☐

Select Occupation

Bio

#### 44) Create a Sample form in HTML

|                   |                                                                           |
|-------------------|---------------------------------------------------------------------------|
| Username:         | <input type="text"/>                                                      |
| Password:         | <input type="password"/>                                                  |
| City of           | <input type="text"/>                                                      |
| Employment:       |                                                                           |
| Web server:       | <input type="text" value="— Choose a server —"/>                          |
|                   | <input type="radio"/> Admin                                               |
| Please specify    | <input type="radio"/> Engineer                                            |
| your role:        | <input type="radio"/> Manager                                             |
|                   | <input type="radio"/> Guest                                               |
| Single Sign-on    | <input type="checkbox"/> Mail                                             |
| to the following: | <input type="checkbox"/> Payroll                                          |
|                   | <input type="checkbox"/> Self-service                                     |
|                   | <input type="button" value="Login"/> <input type="button" value="Reset"/> |

#### 45) Create a Sample form in HTML

**REGISTRATION**

|                   |                                                                                                                                |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Name :            | <input type="text"/>                                                                                                           |
| Password :        | <input type="password"/>                                                                                                       |
| E-Mail :          | <input type="text"/>                                                                                                           |
| Phone No :        | <input type="text"/>                                                                                                           |
| Sex :             | <input type="radio"/> Male <input type="radio"/> Female                                                                        |
| D.O.B:            | <input type="text" value="1"/> <input type="text" value="1"/> <input type="text" value="1990"/>                                |
| Languages Known : | <input type="checkbox"/> Telugu <input type="checkbox"/> English <input type="checkbox"/> Tamil <input type="checkbox"/> Hindi |
| Address :         | <input type="text"/>                                                                                                           |
|                   | <input type="button" value="Submit"/> <input type="button" value="Reset"/>                                                     |

#### 46) Create a Sample form in HTML

| Your details |                                                  |
|--------------|--------------------------------------------------|
| 1. Name      | <input type="text" value="First and last name"/> |
| 2. Email     | <input type="text" value="example@domain.com"/>  |
| 3. Phone     | <input type="text" value="Eg. +447500000000"/>   |

| Delivery address |                      |
|------------------|----------------------|
| 1. Address       | <input type="text"/> |
| 2. Post code     | <input type="text"/> |
| 3. Country       | <input type="text"/> |

| Card details     |                                                                                                                                           |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Card type     | <div><div>1. <input type="radio"/> VISA</div><div>2. <input type="radio"/> AmEx</div><div>3. <input type="radio"/> Mastercard</div></div> |
| 2. Card number   | <input type="text"/>                                                                                                                      |
| 3. Security code | <input type="text"/>                                                                                                                      |
| 4. Name on card  | <input type="text" value="Exact name as on the card"/>                                                                                    |

47) Write an HTML code to demonstrate all input types

## Html Input Types

dd/mm/yyyy  date and time email password

Choose file No file chosen Week --, ----  button ☐ checkbox

url --:--  text phone number type submit

search reset  ☐ Radio number type

-----   Blue  text-area For color
